Mutagenicity

No data available.

Miscellaneous

Lab studies of anionic surfactants in contact with rabbit eyes indicated that they may cause temporary eye damage which healed within one to tow days. Dust of sulfonates may cause respiratory allergies, but there is no data on sulfonate solutions.

Acute and Chronic Effects

See specific route responses in Section 3 **Hazards Identification** above.

SECTION 12 ECOLOGICAL INFORMATION.....

Ecotoxicity

No data available.

Environmental Fate

No data available on 1-Pentantsulfonate, sodium salt.

The acidity of the phosphoric acid in the solution may be reduced readily by natural water hardness minerals, but the phosphate may persist indefinitely. During transport through the soil, phosphoric acid will dissolve some of the soil material, in particular, carbonate-based materials. The acid will be neutralized to some degree with adsorption of the proton and phosphate ions also possible. However, significant amounts of acid will remain for transport down toward the groundwater table.

Other

Phosphoric acid is dangerous to aquatic life in high concentrations.

Standard Chemical Precautions

Keep out of air, water, and soil

SECTION 13 DISPOSAL CONSIDERATIONS.....
